AZIENDA SPECIALIZZATA NEL RIVESTIMENTO CERAMICO
IN BICOTTURA. FIN DALL'INIZIO L'AZIENDA PUNTA SU
GAMME DI QUALITÀ E DAL FORTE IMPATTO ESTETICO,

The history of the ABK brand dates back to 1992 when the company was set up in Finale Emilia as a specialist double-fired wall tile producer. Right from the start, ABK focused on high-quality, visually appealing products that met and often anticipated market trends. The company soon extended its strongly product-oriented approach to the world of floor tiles with the acquisition of several porcelain tile factories.

P.tech

ABK presenta P.TECH, la superficie ceramica che coniuga perfettamente morbidezza e resistenza allo scivolamento. La ricerca e gli investimenti continuati per migliorare l'estetica e le qualità tecniche del prodotto, hanno portato ABK a sviluppare la nuovissima tecnologia P.TECH, che migliora le performance anti-scivolo dei pavimenti, mantenendo inalterati i valori di resistenza meccanica del gres porcellanato, con una finitura estremamente piacevole al tatto e facile da pulire. P.TECH non è un trattamento di superficie, ma è la sintesi di un innovativo processo produttivo che coinvolge la selezione delle materie prime, la fase di pressatura e quella di cottura. Queste superfici, che rispondono positivamente ai parametri di attrito imposti dalle normative più severe AS/NZS 4586:2013 [Australian pendulum test] e BS 7976 - 2:2002 [British pendulum test], si igienizzano con acqua e comuni detergenti, permettendo così la scia perfetta anche per i progetti di aree pubbliche o commerciali, comprese le aree outdoor, wellness & hospitality. I prodotti P.TECH per la loro versatilità permettono inoltre l'utilizzo della stessa superficie su spazi differenti, ma comunicanti, come ad esempio interni ed esterni, garantendo la massima flessibilità progettuale.

ART. POETRY STONE CON SUPERFICIE P.TECH: La superficie P.TECH è prevista su tutti i formati fatta eccezione per 120x280.

ABK is presenting P.TECH, the ceramic surface that combines a soft touch with slip resistance. Ongoing research and investments aimed at improving the aesthetic and technical qualities of products has enabled ABK to develop the innovative P.TECH technology, which improves the slip resistance of floors while delivering the renowned mechanical strength of porcelain stoneware and a finish that is both extremely pleasant to the touch and easy to clean. P.TECH is not a surface treatment but the result of an innovative production process that combines raw material selection with the pressing and firing phases. These surfaces come up to the strictest standards in terms of coefficient of friction such as the AS/NZS 4586:2013 [Australian pendulum test] and BS 7976 - 2:2002 [British pendulum test] and can be cleaned using water and ordinary cleaning agents, making them the ideal choice for projects in public or commercial areas such as outdoor, wellness and hospitality spaces. P.TECH products are also sufficiently versatile to enable the same surface to be used in different but communicating spaces such as interiors and exteriors, thereby guaranteeing the maximum design flexibility.

FULLBODY3D

ABK, grazie ai più evoluti sistemi di miscelazione e pressatura degli impasti ceramici, è in grado di ricreare la complessa struttura dei materiali lapidei. L'esclusiva tecnologia FULLBODY3D si basa sulla miscelazione di materie prime a granulometria variabile e permette di ottenere ciò che la natura ha creato nei millenni, riproducendo l'estetica delle pietre sia in superficie che nel corpo della piastrella. La continuità fra massa, superficie e bordo delle piastrelle risponde alle esigenze dell'arredo, in quanto l'effetto visivo è fedele anche dopo le operazioni di taglio, foratura e rifinitura necessarie a ottenere il prodotto finito.

ABK, thanks to cutting-edge ceramic body mixing and pressing systems, perfectly recreates the complex structure of the stone material. The exclusive FULLBODY3D technology is based on the mixing of raw materials with variable particle size. This replicates the visual effect of what nature has created over the millennia, mimicking the aesthetics of the stone both on the surface and the body of the tile. The continuity between the body, surface and sharp edge also complies with furniture requirements, as the visual effect remains unaltered even after the cutting, drilling and finishing operations needed to obtain the finished product.

P.tech

ABK presenta P.TECH, la superficie ceramica che coniuga perfettamente morbidezza e resistenza allo scivolamento. La ricerca e gli investimenti continui per migliorare l'estetica e le qualità tecniche del prodotto, hanno portato ABK a sviluppare la nuovissima tecnologia P.TECH, che migliora le performance anti-scuolamento dei pavimenti, mantenendo inalterati i valori di resistenza meccanica del gres porcellanato con una finitura estremamente piacevole al tatto e facile da pulire. P.TECH non è un trattamento della superficie, ma è la sintesi di un avanzato processo produttivo che combina la selezione delle materie prime, la fase di pressatura e quella di cottura. Queste superfici, che rispondono positivamente a parametri di riferimento come quelli delle normative più severe AS/NZS 4586:2013 [Australian pendulum test] e BS 7976 - 2:2002 [British pendulum test], si igienizzano con acqua e comuni detergenti, pertanto costituiscono la scelta perfetta anche per progetti di aree pubbliche o commerciali, comprese le aree outdoor, wellness & hospitality. I prodotti P.TECH per la loro versatilità permettono inoltre di utilizzare la stessa superficie in spazi differenti, dai comunicanti, come ad esempio interni ed esterni, garantendo la massima flessibilità progettuale.

ART. BLEND CON SUPERFICIE P.TECH: La superficie P.TECH è prevista su tutti i formati fatta eccezione per 120x280, 90x90 blend dots.

ABK is presenting P.TECH, the ceramic surface that combines a soft touch with slip resistance. Ongoing research and investments aimed at improving the aesthetic and technical qualities of products has enabled ABK to develop the innovative P.TECH technology, which improves the slip resistance of floors while delivering the renowned mechanical strength of porcelain stoneware and a finish that is both extremely pleasant to the touch and easy to clean. P.TECH is not a surface treatment but the result of an innovative production process that combines raw material selection with the pressing and firing phases. These surfaces come up to the strictest standards in terms of coefficient of friction such as the AS/NZS 4586:2013 [Australian pendulum test] and BS 7976 - 2:2002 [British pendulum test] and can be cleaned using water and ordinary cleaning agents, making them the ideal choice for projects in public or commercial areas such as outdoor, wellness & hospitality. P.TECH products are also sufficiently versatile to enable the same surface to be used in different but communicating spaces such as interiors and exteriors, thereby guaranteeing the maximum design flexibility.

ART. BLEND CON SUPERFICIE P.TECH: Every size is provided with the P.TECH surface, except for the 120x280 size and 90x90 blend dots.

CONSIGLI DI POSA - ADVICE FOR LAYING

POSA TRADIZIONALE

La posa tradizionale è ideale per la realizzazione di pavimentazioni carrabili.

POSA A SECCO SU GHIAIA

La posa su ghiaia permette il perfetto drenaggio delle acque piovane.

POSA A SECCO SU ERBA

La posa diretta su erba permette di creare percorsi e camminamenti integrandosi perfettamente nell'ambiente.

POSA A SECCO SU SABBIA

La posa su sabbia permette di creare percorsi e camminamenti per spiagge e stabilimenti balneari.

POSA SOPRAELEVATA DA ESTERNO

Il sistema di pavimentazione sopraelevata prevede l'utilizzo di supporti portanti di tipo autolivellante, regolabili oppure fissi che si adattano con semplicità e sicurezza ad ogni tipo di pavimento sovrastante. Il sistema permette la realizzazione di piani di posa con altezze variabili, da terra, comprese fra 25 e 270 mm. L'indipendenza della pavimentazione dai supporti garantisce l'assorbimento di eventuali movimenti strutturali. Il sistema sopraelevato non necessita di massetto in cemento e consente una diminuzione del peso sulla struttura portante. Le fughe aperte tra una piastrella ed un'altra consentono un facile deflusso dell'acqua piovana evitando tutti i rischi di accumulo o di ristagno. La presenza dell'intercapdeide fra il piano di calpestio e il piano di appoggio favorisce l'areazione e l'isolamento termico. Questa soluzione permette inoltre il passaggio di impianti e tubazioni nell'intercapdeide, e la facile ispezione degli stessi una volta installata la pavimentazione.

OUTDOOR RAISED LAYING SYSTEM

The raised floor system foresees the use of self-leveling, adjustable or fixed load bearing supports that easily adapt to the floor below in total safety. The system is suitable to create laying designs with variable heights from the ground, which range between 25 and 270 mm. The independence of the flooring from the supports guarantees the absorption of any structural movements. The raised system does not require a cement screed and reduces the load on the bearing structure. The open joints between the tiles allow rainwater to easily drain off, avoiding any risk of water accumulation or stagnation. The gap between the tread surface and the support surface favours ventilation and heat insulation. This solution allows for the installation of systems and piping in the gap, which can be easily inspected even once the floor has been installed.

Per informazioni sull'utilizzo dei supporti per pavimentazione sopraelevata consultare il catalogo OUT.20.
To see more about the use of self-leveling for raised floor consult the OUT.20 catalog.

**SOLUZIONI PER SUPERFICI CARRABILI URBANE E RESIDENZIALI
DRIVE-OVER SURFACES SOLUTIONS FOR URBAN AND RESIDENTIAL SPACES**

I prodotti OUT.30, grazie allo spessore maggiorato di 30 mm, hanno le caratteristiche tecniche necessarie per la posa di tutte le situazioni carrabili in esterno, dagli spazi residenziali privati fino ai centri urbani.

In caso di traffico leggero, come nei viali, nei cortili e nei parcheggi delle abitazioni, la pavimentazione può essere installata senza incollaggio. In questo caso il materiale si stende su una base di aggregati lapidei di varia granulometria compattati, avendo cura di utilizzare i comuni distanziatori in materiale plastico. Nelle zone sottoposte a traffico elevato, come percorsi stradali e piazze cittadine, è invece necessario effettuare la posa su massetto cementizio con malta d'allevitamento, seguendo procedimenti analoghi a quelli utilizzati per la posa dei materiali naturali.

With their extra-large 30 mm thickness, OUT.30 slabs have the necessary technical characteristics for use in any outdoor vehicular application, from private residential areas to urban centres.

For light traffic situations such as driveways, courtyards and residential parking spaces, the slabs can be installed without adhesive. In this case, they should be laid on a base of compacted stone aggregates of various sizes and positioned using ordinary plastic spacers.

In heavy traffic areas such as roads and city squares, the slabs should be laid on a cement screed with bedding mortar following similar procedures to those used for the installation of natural materials.

COLLANTI E SIGILLANTI PER L'EDILIZIA BUILDING ADHESIVES AND SEALANTS

COLLANTI PER EDILIZIA

Gli adesivi edili sono un insieme di sostanze naturali o sintetiche, che, opportunamente applicate, sono capaci di far aderire fra loro superfici di materiali uguali o diversi.
L'azione degli adesivi deriva da fattori interni (composizione, proprietà chimiche delle sostanze utilizzate) ed esterni (condizioni atmosferiche – ambiente umido/asciutto – materiali da incollare – ceramica/pietra naturale/ricomposti – supporto sul quale incollare – massetto/ moquette/laminato – destinazione finale – pavimento/rivestimento/interni/esterni): tali fattori ne determinano la composizione chimica e dunque le differenti tipologie. In generale possiamo affermare che ciascuno di essi viene identificato con una lettera ed un numero in progressione, che ne determina l'upgrade di prestazione: sono tutti universalmente validi.

C1: collante a base cementizia, basico (per materiale ceramico poroso/assorbente o bicolatura).
C2: collante a base cementizia migliorato (per materiali ceramici non assorbenti).
F: collante a presa rapida (fast). È utilizzato per esempio in condizioni di cantiere particolari e in tutte quelle situazioni che richiedono rapidità di intervento.
T: il collante ha un comportamento tixotropico (ovvero antiscivolo: dunque particolarmente apprezzato per la posa su parete di materiali di grandi formati e/o spessori maggiorati).
E: tempo aperto allungato (extended) ovvero il tempo massimo entro il quale il materiale può essere posato dopo l'applicazione dell'adesivo.
S1: il collante è deformabile (stretchy) ovvero ammortizza le tensioni termiche delle piastrelle e della superficie di posa senza danneggiare la superficie installata.
S2: variante migliorata della precedente.

Tutte queste caratteristiche possono coesistere e combinarsi fra loro, dando vita a variegate tipologie.
Il collante è l'ultimo strato prima del materiale scelto per la pavimentazione (legno, materiale ceramico, pietra naturale, etc) e contribuisce alla solidità del pavimento stesso: bisogna dunque non solo applicarlo con cura ma anche e soprattutto scegliere la tipologia idonea al materiale e al cantiere.

BUILDING ADHESIVES

Building adhesives are a mix of chemicals or natural substances providing or promoting adhesion.
Adhesives strength is depending on 2 different features: internal (chemical composition and chemical properties of the substances) and external (weather conditions - damp/dry room – materials to glue – ceramics/quarry stones/wood/resin where materials have to be glued - screed/ carpet/ laminate – end use – floor/wall, interiors/exterior). All these set out the chemical composition and the varieties. The different kind of binding materials are identified by an alphabetical letter and a progressive number, specifying the upgrading performance.

C1: cement glue (for absorbing ceramic materials).
C2: improved cement glue (for not absorbing ceramic materials).
F: fast glue (usually less than 30 minutes); used whenever and wherever fast action is required, even during winter in order to prevent the freezing of the water.
T: tixotropic glue, i.e. antigrip (used for big sizes or extra thick wallcoverings).
E: open extended time (maximum time limit to fix down the material after the adhesive film application).
S1: stretchy glue i.e. thermal and shock absorber .
S2: highly stretchy glue (improved S1 glue).

All these, can be mixed together, giving out several types in return.
Binding materials are the last layer before tiles and support the firmness of the floor itself: it is crucial to select the proper one and to apply them properly.

WIDE SUPERSIZE SLABS

CERAMIC R-EVOLUTION

Il progetto WIDE ABK parte dalla rivoluzionaria tecnologia produttiva CONTINUA+, che permette di produrre lastre in gres porcellanato robuste e leggere allo stesso tempo, grazie allo spessore ridotto di 6 fino alla dimensione record di 160x320 cm. Il nuovo sistema di pressatura prevede la compattazione a secco delle materie prime e consente di ottenere superfici particolarmente apprezzabili sia per la qualità estetica che per le performance tecniche.

ABK's WIDE collection consists of tough yet lightweight porcelain slabs with a thickness of just 6 and a record size of 160x320 cm produced using the revolutionary CONTINUA+ technology. The new pressing system involves dry compaction of raw materials and is able to produce surfaces that combine excellent aesthetic quality with outstanding technical performance.

WIDE & STRONG

WIDE è perfettamente idoneo sia per il rivestimento che per la pavimentazione, in ambito residenziale e commerciale. Lo spessore 6 mm consente di mantenere un'ottima resistenza al carico di rottura reale.

WIDE is ideal as both a floor and wall covering in residential and commercial projects. The 6 mm thickness enables it to maintain excellent breaking strength in real situations.

PESO WEIGHT

ABK 8,5 mm = 20,0 Kg x mq
ABK 6 mm = 14,5 Kg x mq

LITE GOES WIDE

Lo spessore 6 mm consente di ridurre il peso per mq con interessanti vantaggi in termini di maneggevolezza e movimentazione.

The 6 thickness results in a reduced weight per square metre, bringing significant advantages in terms of ease of working and handling.

WIDE IS LEVELING

La combinazione fra impasto ad elevata plasticità, spessore e grande dimensione, dona particolare elasticità al prodotto, per ottenere risultati di posa sempre impeccabili.

The combination of a body with high plasticity, thickness and dimensions makes for a highly elastic product that delivers consistently flawless results.

EASY AS WIDE

La formulazione dell'impasto, unita alla compattazione a secco e alla cottura in fornì di nuova concezione, genera un gres particolarmente facile da tagliare e lavorare.

The chemical formulation of the body combined with the raw material dry compaction process produces a porcelain slab that is easy to cut and work with.

WIDE MEANS GREEN

L'impasto contiene il 40% minimo di materie prime di qualità recuperate da altri processi produttivi, per questo i prodotti WIDE possono essere accreditati all'interno del sistema internazionale LEED.

NEW DIMENSIONS

Uno degli obiettivi del progetto WIDE è quello di fornire un materiale ceramico tecnologicamente avanzato facilmente utilizzabile in contesti anche molto diversi, per dimensione e per destinazione d'uso. WIDE è un vero e proprio programma di formati, tutti rettificati, pensati per coprire a 360° le esigenze legate alla progettazione, a partire dagli spazi residenziali, fino alle grandi opere in ambito pubblico e commerciale.

One of the aims of the WIDE project is to supply a hi-tech ceramic material that is easy to use in very different sizes and applications. WIDE comes in a large selection of sizes, all rectified, ideal for uses ranging from residential through to large-scale works in public and commercial spaces.

EVERYWHERE YOU LIKE

Tenendo conto delle principali qualità del materiale, tra cui la robustezza, la resistenza agli sbalzi termici, oltre allo spessore contenuto e alla facilità di lavorazione, le grandi lastre WIDE ampliano la destinazione d'uso del gres porcellanato. Sempre meno fughe e sempre più spazio alla creatività di progettisti e interior designers, che grazie ai prodotti WIDE possono apprezzare la versatilità di una ceramica senza più confini.

Taking account of the material's key qualities, including strength, thermal shock resistance, low thickness and ease of working, the WIDE large-size slabs extend the fields of use of porcelain. The WIDE collection has fewer joints while giving enormous creative freedom to architects and interior designers, who appreciate the versatility of this ceramic surface without limits.

POSA MOVIMENTAZIONE DELLE LASTRE

Durante le verifiche preliminari sul cantiere è opportuno accertare anche la possibilità di movimentare facilmente le lastre all'interno dei locali di posa. Tutti i formati che superano i 100 cm sia di lunghezza che di larghezza devono essere maneggiati da 2 postori. Per una corretta gestione delle lastre, a partire dalla fase di apertura degli imballi, è necessario avvalersi di dispositivi idonei per la movimentazione.

Per la movimentazione manuale e la successiva posa in opera delle lastre WIDE 160x320, al fine di garantire la sicurezza per gli operatori e l'integrità del materiale, è vivamente consigliato l'utilizzo di barre di movimentazione con ventose. **1**

Per gli altri formati WIDE inferiori può essere sufficiente l'utilizzo delle sole ventose. **2**

Gli appositi carrelli di movimentazione sono ideali sul cantiere come "magazzino" per una o più lastre, oltre che per effettuare in totale sicurezza l'operazione di spalmatura dell'adesivo sul retro della lastra. **3**

LAYING HANDLING THE SLABS

When performing a preparatory inspection of the site, it is important to check whether the slabs can be handled easily in the installation area. All sizes in excess of 100 cm in either direction must be handled by 2 installers. Always use proper handling equipment to handle the slabs, from unpacking onwards.

When handling and laying WIDE 160x320 cm slabs by hand, use handling bars with suction cups to safeguard both the material and the installers themselves. **1**

For smaller WIDE sizes, it may be sufficient to use just suction cups. **2**

Handling carts are ideally suited for holding slabs on site as well as for applying the adhesive to the back of the slab in total safety. **3**

**TAGLIO DELLE LASTRE**

È opportuno effettuare le operazioni di taglio su una superficie piana, stabile e planare. È consigliato l'utilizzo di guide da taglio professionali con carrello incisore. **4**

Una volta rimossa la lastra dall'imballo e posizionata sul piano di lavoro segnare alle due estremità la dimensione da asportare. Posizionare e bloccare la guida di taglio, tenendo conto della distanza del disco di taglio. **5**

Incidere le estremità della lastra per circa 5 cm spingendo il carrello verso l'esterno, procedere poi con l'incisione della lastra avendo cura di esercitare una pressione ed un avanzamento del carrello costanti per tutta la lunghezza del taglio.

Traslare la lastra in modo da portare la linea di incisione al di fuori del piano di lavoro di circa 5/10 cm.

Rimuovere la guida di incisione ed iniziare l'operazione di troncatura posizionando l'apposita pinza in corrispondenza della linea incisa; esercitare una pressione leggera e progressiva verso il basso. Quest'operazione risulterà molto semplice in quanto i prodotti Wide sono privi di tensionature e per questo facilmente lavorabili. **6**

A questo punto si può procedere con la finitura, che dovrà essere effettuata utilizzando gli appositi tamponi diamantati o in alternativa mediante dischi resinosi abrasivi. **7/8**

CUTTING THE SLABS

We recommend cutting the slabs on a flat, stable surface (table). Use professional cutting guides with a cutting slide. **4**

Remove the slab from its packaging and place it on the table, then mark the cut at both ends. Locate and lock the cutting guide (make sure to account for the cutting disk offset). **5**

Cut the ends of the slab by pushing the slide about 5 cm from the interior to the edge of the slab, then cut the slab in a single smooth, even stroke at constant pressure.

Slide the slab so that the cut line is about 5 to 10 cm beyond the edge of the table.

Remove the cutting guide and shear off the excess material with the clamp located at the cut line; exert gradual, light pressure downwards. This is made particularly easy by the fact that Wide products have no tensioning and are thus easy to work. **6**

You can now finish the slab using diamond pads or abrasive resin disks. **7/8**

**TAGLI A L/SCASSI/ FORI RETTANGOLARI**

Una volta tracciata sulla lastra la porzione da asportare è opportuno eseguire, in corrispondenza del punto di congiunzione delle linee, fori di diametro 6/8 mm con foretti diamantati a umido o a secco. **9**

Congiungere poi i fori mediante una smerigliatrice angolare equipaggiata con disco diamantato (diametro max. 125 mm) **10**

**INCOLLAGGIO**

Le lastre WIDE richiedono l'utilizzo della tecnica a doppia spalmatura, ovvero il collante dev'essere applicato sia sul fondo di posa che sul retro della lastra. **11**

Si consiglia l'utilizzo di adesivo in polvere a base cementizia a letto pieno di classe C2F (E) S1 / S2 come Baulite S2 di Hardkoll. **12**

Assicurarsi che la superficie da rivestire sia consistente, planare, priva di polvere e di uni/grassi, così come è bene rimuovere le polveri che possono trovarsi a contatto delle lastre. Stendere il collante sulla superficie da rivestire con spatola a denti inclinati con dente minimo di 8mm con movimenti lineari e mai circolari.

Stendere il collante sul retro della lastra con spatola dentata mai inferiore a 5 mm (tenendo conto che la somma delle spatole utilizzate per sottofondo e lastra dev'essere compresa fra i 13 e i 14mm).

Per garantire la perfetta posa dei prodotti WIDE occorre far defluire per vibrazione le bolle d'aria che si possono formare fra la lastra e l'adesivo fino a ottenere il "letto pieno" di collante. Per fare ciò è consigliabile avvalersi di un battitore manuale in gomma oppure utilizzare gli appositi dispositivi elettrici batti-piastrelle. **13/14**

In relazione al grande formato è consigliato l'utilizzo di distanziatori leviganti facendo attenzione che lo strato di adesivo fra la lastra e masetto sia almeno di 4 mm, per evitare interruzioni nella massa adesiva. **15/16**

La fuga minima consigliata, in relazione alla posizione dei giunti di dilatazione, è di 2 mm. Nel caso di pareti e pavimenti a contatto, da posare entrambi con lastre ceramiche, è indispensabile rispettare questa larghezza minima per garantire un perfetto risultato nel tempo. A rivestimento è possibile realizzare fughe inferiori in base alle opportune verifiche tecniche da effettuarsi sul cantiere. Le fughe dovranno essere riempite per almeno i 2/3 dello spessore con l'apposito sigillante, pertanto occorre prestare attenzione all'eventuale presenza di residui di adesivo all'interno.

GLUING

WIDE slabs must be back-buttered; in other words, the adhesive must be applied both to the substrate and the back of the slab. **11**

We recommend using a cement-based full bonding powder adhesive, Class C2F (E) S1/S2, such as Hardkoll Baulite S2. **12**

Make sure the surface is stable, flat, clear of grease and dust, and also wipe off any dust on the back of the slab.

Apply the adhesive to the surface with an angled tooth trowel (at least 8 mm), in a linear motion (never in circles).

Apply the adhesive to the back of the slab with a toothed trowel (at least 5 mm); note that the sum of the trowel sizes used for the slab and substrate must be 13 - 14 mm. To ensure perfect installation of WIDE products, use vibration to eliminate any bubbles between the slab and the substrate to obtain a full bonding effect. Use either a rubber mallet or electric tile vibrator for this purpose. **13/14**

When installing large sizes, we recommend using levelling spacers; the layer of adhesive between the slab and the substrate must be at least 4 mm thick to ensure continuity. **15/16**

The expansion joint between slabs should be at least 2 mm wide. For contact walls and floors, both installed with ceramic slabs, this minimum dimension must be used to ensure a long-lasting result. A smaller joint width is possible when installing walls, following technical inspection on site. The joints must be filled to at least 2/3 of their depth with sealant; take care to remove all adhesive from the joint first.

LOGISTICA NUOVI SISTEMI DI IMBALLO

L'innovazione della gamma WIDE si espriime anche attraverso la parte logistica del progetto. ABK Group rivoluziona il sistema di imballaggio delle lastre ed è a oggi l'unica azienda che ha portato il sistema a cavalletto impilabile alla dimensione di cm 75x284x147,5 (lastre 120x280), 75x168x109 (lastre 80x160) e 75x26x200 (lastre 26x200).

Questi i principali vantaggi offerti:

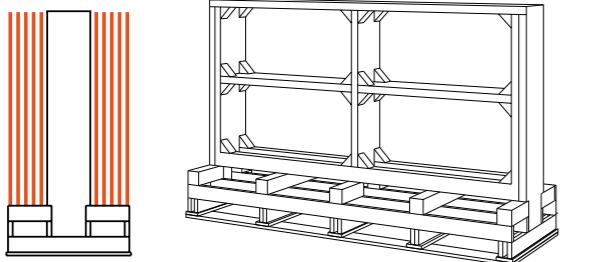

- essendo impilabile permette di ottimizzare gli spazi all'interno dei magazzini.*
- la profondità di 75 cm consente di sfruttare a pieno il volume di carico dei container (3 pallets ne occupano perfettamente la larghezza).
- Il posizionamento verticale del prodotto garantisce una maggiore protezione delle lastre durante le fasi di trasporto.
- facilita le operazioni sul cantiere in quanto le lastre si trovano già posizionate in verticale, il materiale è facilmente ispezionabile e removibile per l'installazione.
- le dimensioni complessive del cavalletto consentono maggiori spazi di manovra all'interno dei locali di posa rispetto alle casse tradizionali e agevolano il sollevamento del materiale mediante mezzi meccanici (gru-montacarichi).
- è caratterizzato da un sistema di regettatura che consente di liberare anche 1 solo collo alla volta, senza compromettere la stabilità del materiale che rimane sul pallet, evitando così il rischio di rottura. Le lastre dovranno essere liberate rispettando la sequenza opposta a quella con cui sono state confezionate, quindi iniziando dall'ultimo collo regettato.

LOGISTICS NEW PACKAGING SYSTEMS

Innovation in the WIDE range is also reflected in the project's logistics. ABK Group has revolutionised the packaging of ceramic slabs and is the only company to have expanded the stacking rack pallet system to the 75x284x147,5 (slabs 120x280), 75x168x109 (slabs 80x160) e 75x26x200 (slabs 26x200) cm size.

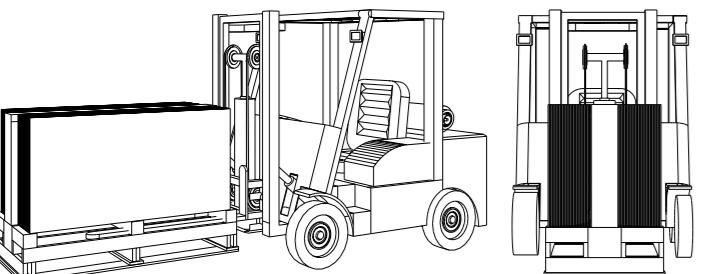

This has the following advantages:

- stacking optimises the use of space in warehouses.*
- the 75 cm depth enables full use of container load space [3 pallets fit perfectly side by side]. The vertical positioning of the product better protects the slabs during shipping.
- it facilitates work on site, since the slabs are already positioned vertically, making the material easy to inspect and remove for installation.
- the overall size of the rack pallet provides greater space for manoeuvring in the installation area in comparison with conventional crates, and also makes it easier to lift the slabs mechanically (with a crane or lift).
- the rack pallet system employs strapping which allows the user to remove a single package at a time without affecting the stability of the other packages on the pallet, thus minimising the risk of breakage. The slabs must be released from the packaging by reversing the packaging sequence, i.e. starting with the last package to have been strapped on.

AUTO-LEVELING™

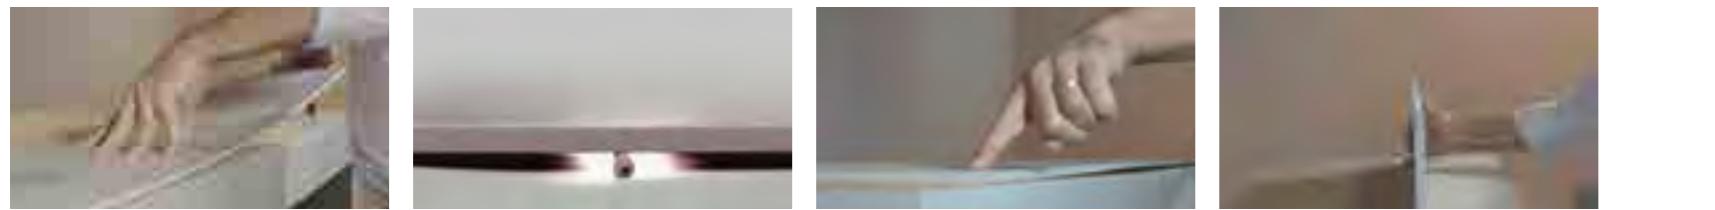

Facile installazione - Easy laying

CARATTERISTICHE

Auto-Leveling garantisce la massima facilità di posa ai listoni di grande formato. La tecnologia si basa sull'impiego di impasti a base di materie prime per loro natura altamente stabili e resistenti, ma al tempo stesso ad elevata plasticità, che conferiscono a questa tipologia di prodotti qualità uniche. Il materiale ottenuto, caratterizzato da un minimo grado di convessità, aderisce perfettamente al massetto. Una volta posata, la piastrella si auto-livella, mantenendo una perfetta planarità. La tecnologia Auto-Leveling si applica alle lastre ceramiche nei formati 20x170, 40x170 cm (sp8,5mm) e 26x200 cm (sp7mm).

CHARACTERISTICS

Auto-Leveling guarantees the maximum ease of installation for large-format planks. The technology uses raw materials that combine stability and strength with high plasticity, giving unique qualities to this type of product. The resultant tiles have a small degree of convexity and bond perfectly to the screed. Once installed, the tiles self-level and maintain perfect flatness. Auto-Leveling technology is used for ceramic tiles in sizes 20x170 cm, 40x170 cm (thickness 8,5mm) and 26x200 cm (sp7mm).

Lastre prodotte con materie prime ad elevata plasticità, resistenti ma flessibili.

Appoggiate su qualsiasi superficie, anche non perfettamente planare, le lastre si auto-livellano.

Il prodotto auto-leveling agevola la posa tradizionale, si monta senza distanziatori leviganti, seguendo qualsiasi schema di posa.

Ceramic slabs manufactured with highly plastic raw materials, strong and flexible at the same time.

Laid on the screed they self-level, even if the surface is not perfectly flat.

Auto-leveling tiles help the traditional fixing, every installation pattern can be achieved, without leveling spacers.

CONSIGLI DI POSA E PULIZIA

AVVERTENZE GENERALI

Indipendentemente dal tipo di prodotto e formato scelto, prima di procedere con la posa è opportuno fare una verifica sul cantiere per valutare le condizioni dei sottostendi. La posa richiede le migliori condizioni del sottostando. Che dovrà sempre essere:

- asciutto e stagionato
- pianeggiante e privo di fessurazioni
- pulito, libero da polvere detriti o grumi di cemento
- compatto e resistente

La perfetta riuscita di un pavimento o di un rivestimento è il frutto della combinazione di molteplici fattori; per ottenere il migliore effetto estetico nella posa è opportuno ricordare che i prodotti ABK Group prevedono un numero variabile di pattern grafici, la cui successione all'interno delle scatole avviene in modo del tutto casuale.

POSA DEI PRODOTTI RETTIFICATI

Per raggiungere un effetto ottimale ABK suggerisce di mantenere almeno 1 o 2 mm di fuga per una posa mono-formato e 2 mm per combinare formati misti nelle pose modulari suggerite dai cataloghi.

POSA DEI PRODOTTI NON RETTIFICATI

L'alto grado di vitrificazione delle piastrelle ABK comporta modeste tolleranze di calibro, pertanto nella posa dei prodotti a bordo naturale è consigliabile lasciare una fuga di almeno 3 mm fra le piastrelle.

OPERAZIONI PRELIMINARI

Una volta scelto il materiale da posare, coerentemente con i requisiti tecnici, lo stile e la destinazione d'uso degli ambienti, è bene seguire alcune raccomandazioni prima di procedere con l'installazione:

- stendere a terra almeno 3mq di prodotto per controllare l'effetto d'insieme, avendo cura di verificare accuratamente calibro, tonalità e scelta.
- Specie nel caso di prodotti con elevata variabilità grafica, è bene posare il materiale attingendo da più scatole, le variazioni grafiche e cromatiche del prodotto sono una caratteristica qualificante che l'abilità del posatore può valorizzare, al contrario un prodotto posato senza tenerne conto può risultare esteticamente poco gradevole.
- È opportuno evitare di segnare la parte superiore delle piastrelle con matite o pennarelli e dedicare particolare attenzione ai prodotti lucidi, patinati o lappati che dovranno essere coperti durante i lavori di cantiere.
- Attendere 48/72 ore prima di sottoporre il pavimento al normale transito.

La posa senza fuga, soprattutto nei grandi formati è fortemente sconsigliata dai maggiori produttori di collante per i seguenti motivi:

- Difficoltà di assorbimento di eventuali movimenti strutturali in assenza di elementi comprimibili.
- Diverso comportamento dilatometrico fra piastrelle e massetto, in presenza di elevate escursioni termiche.
- Difficoltà di realizzazione di una duratura ed efficace stuccatura.
- Abk sconsiglia assolutamente posa senza fuga, per le quali si declina ogni responsabilità.

Durante le operazioni di posa, nel caso venga scelto uno schema sfalsato, evitare di far coincidere i vertici di una piastrella con la metà delle altre a fianco.

Soltanto i prodotti AUTO-LEVELING si prestano ad essere posati seguendo liberamente ogni schema di posa.

When laying tiles in a staggered pattern, make sure there are no tiles positioned with the corner coinciding with the centre of the adjacent tiles.

Only AUTO-LEVELING products are suitable for all installation patterns.

INSTALLATION AND CLEANING ADVICE

GENERAL WARNINGS

Regardless of the chosen product type or size, an on-site inspection should be carried out prior to installation to assess the conditions of the substrates. Perfect substrate conditions are essential for a successful installation. Substrates must be:

- dry and properly cured
- clean and free of dust, debris or lumps of cement
- flat and free of cracks

The success of a floor or wall tile installation is the result of a combination of multiple factors; to achieve the best possible aesthetic effect in installation, remember that ABK Group products come in a variable number of graphic patterns packed in boxes in a completely random sequence.

INSTALLATION OF RECTIFIED-EDGE TILES

For optimal results, ABK recommends allowing a joint of at least 1 or 2 mm when laying same-sized tiles and 2 mm for different-sized tiles laid using the modular systems described in the catalogues.

INSTALLATION OF NON-RECTIFIED TILES

The high degree of vitrification of ABK tiles means dimensional tolerances are low. Therefore, when laying tiles with natural press-formed edges, at least a 3mm joint should be allowed between each tile.

PRELIMINARY OPERATIONS

It is advisable to follow some recommendations before proceeding with the installation of the selected tiling material, which should be carried out in compliance with the technical requirements, style and intended application:

- stendere a terra almeno 3mq di prodotto per controllare l'effetto d'insieme, avendo cura di verificare accuratamente calibro, tonalità e scelta.
- Place some tiles (at least 3 m²) over the flooring surface to check the final effect, making sure you have the right tile size, shade, and quality class.
- In the case of products whose graphics tend to differ considerably from one tile to the next, it is advisable to take the tiles from different boxes and mix them. The graphic and colour variations of the tiles are an important feature which can be enhanced by a skilled tile layer. Overlooking such features, on the contrary, may lead to poor aesthetic results.
- Avoid marking the front of the tiles with pencils or markers. Be particularly careful with glossy, matt or lapped tiles, which should be kept covered during building work.
- Wait 48/72 hours before walking over the newly laid tiles.

Jointless tile installation, particularly in the case of large-size tiles, is strongly advised against by most adhesive manufacturers for the following reasons:

- Any structural adjustments may not be absorbed due to the lack of compressible material.
- Wide temperature ranges may cause expansion effects between the tile and screed.
- Effective, durable grout joints may be difficult to achieve.
- ABK strongly advises against jointless tile installation and cannot be held liable for any damage deriving therefrom.

STUCCATURA

1) Qualora non si utilizzasse la boiacca composta da cemento e sabbia, si consiglia di utilizzare colori di stucco su tono (possibilmente non utilizzare su materiali di colore chiaro stucchi di colore scuro, tipo nero, blu, rosso, o bianchi).

2) Riempire le fughe con gli stucchi solo quando il pavimento è calpestabile, togliendo preventivamente dalle fughe ogni tipo di residuo.

3) Eseguire la stuccatura a "regola d'arte", seguendo le indicazioni del progettista, del responsabile di cantiere e del capitolo di posa.

4) Stuccare piccole superfici per volta (4/5 mq) e asportare le quantità eccessive con spugne o stracci umidi (di sola acqua pulita).

5) Stucchi cementizi non additivati: seguire attentamente le indicazioni dei fabbricanti, a fine giornata pulire i residui di posa con spugna appena bagnata.

6) Epoxy grouts o added grouts (with latex, etc): follow the manufacturer's instructions to the letter.

NOTE: do not under any circumstances [installation, grouting or cleaning] use abrasive, acidic or alkaline products.

NOTA: non utilizzare in nessun caso [posa, stuccatura e pulizia] prodotti abrasivi, acidi o basici, acetone, solventi e diluenti.

Do not apply adhesive tape or similar products to the decorated surface.

LAVAGGIO DOPO LA POSA

Il lavaggio dopo la posa è una fase di fondamentale importanza per tutti gli interventi successivi e per la manutenzione.
La pulizia di fine cantiere fatta con prodotti a base acida tamponati, quali ad esempio Deterdek di Fila o Cement Remover di Faber etc., va eseguita una sola volta e presenta l'ulteriore vantaggio di conferire uniformità cromatica alla superficie.
Con il lavaggio acido dopo la posa si eliminano i residui di posa e il normale sporco di cantiere come: malta, colla, pittura, sporco da cantiere di varia natura. È bene sapere che oltre il 90% delle contestazioni in cantiere è dovuto ad un cattivo, o addirittura inesistente, lavaggio con prodotti acidi. Per questo è per evidente che un prodotto a base acida usato per la prima pulizia via ad incassare le fessure e le fughe a base cementizia delle fughe, è necessario, prima dell'operazione di pulizia, bagnare il pavimento affinché le fughe vengano impregnate e pertanto protette dall'azione corrosiva dell'acido stesso.

- E' opportuno:
- Togliere con appositi detergenti a base alcalina sostanze grasse o simili
- Procedere al lavaggio dopo la posa
- Risciacquare abbondantemente il pavimento, raccogliendo l'acqua residua.
- La pulizia si esegue dopo 4-5 giorni dalla lucidatura (lo stucco deve indurire) e non oltre i 10 giorni, oltre questi tempi la pulizia può diventare molto più laboriosa; attenersi scrupolosamente ai consigli riportati dal produttore di detergenti.
- Fare sempre test preventivi (su una piastrella non posata), in particolare per prodotti lappati o levigati.

PULIZIA E MANUTENZIONE MANUTENZIONE ORDINARIA

Si consiglia l'utilizzo di un comune detergente neutro diluito in acqua calda. Evitare l'utilizzo di prodotti acidi, alcalini, ceranti e/o impregnanti.
Nella pulizia ordinaria occorre limitare al massimo l'uso di mezzi abrasivi (ad esempio: paglietta di metallo, spugnette di ferro o acciaio). Questa precauzione diventa un obbligo nel caso di piastrelle con superficie lucida, più esposte ad effetti di scuffiture, graffi...
In caso di sporco più intenso o di superfici particolarmente strutturate, usare un detergente a base acida, ma evitare di usare lo spray.

Nella pratica quotidiana occorre considerare che certi tipi di sporco (polvere, sabbia) aumentano l'effetto abrasivo del traffico pedonale. Cercare quindi di prevenire la presenza di questa tipologia di sporco dall'esterno, predisponendo l'utilizzo di zerbino o stuoia all'ingresso.

RIMOZIONE DI PATINE LUCIDE

Nei normali detergenti in commercio sono a volte contenute cere o additivi lucidanti che, lavaggio dopo lavaggio, depositano sul pavimento patine lucide, causa di noiose alzature. Patine di questo tipo possono essere rimossate anche da alcuni stucchi per le fughe. Semplici alimenti come Coca Cola, vino, acqua, etc., cadendo sul pavimento tolzano questa patina lucida e ripristinano l'aspetto originale. In questi casi, in realtà sono le uniche parti pulite del pavimento.

In questi casi, dopo aver fatto un test preventivo, bisogna:

- Togliere la patina lucida da tutto il pavimento con un tipo di detergente a base acida.
- Utilizzare per le pulizie quotidiane, detergenti neutri che non contengono né cere né patine lucidanti.

MANUTENZIONE STRAORDINARIA

Nel caso di tracce di sporco resiste alla pulizia ordinaria si raccomanda l'utilizzo di un detergente adeguato in funzione del tipo di sporco e comunque, prima dell'uso, fare sempre test preventivi su una piastrella non posata. Nella tabella "PRODOTTI PER LA PULIZIA E LA MANUTENZIONE" sono indicati i detergenti efficaci in funzione del tipo di macchia.

PAVIMENTI E RIVESTIMENTI METALLIZZATI

Per la pulizia e manutenzione di piastrelle metallizzate si raccomanda di non usare assolutamente detergenti acidi o alcalini. Usare esclusivamente prodotti con pH neutro come ad esempio Fila Cleaner o Floor Cleaner di Faber. In ogni caso verificare sempre prima il prodotto su una porzione di materiale non posato ed evitare di lasciare il detergente sulle piastrelle per più di 10-15 min. Risciacquare sempre abbondantemente con acqua.

TRATTAMENTO PRODOTTI LAPPATI E LEVIGATI

L'apposita e levigatura sono lavorazioni che prevedono sempre l'asportazione di una parte superficiale dello smalto o del corvo stesso della piastrella. In tutti i pavimenti ceramici disponibili sul mercato, tale lavorazione, pur in presenza di materiali vetrosi o a bassissimo assorbimento, può comportare l'apertura di microporosità superficiali che a contatto con particolari tipi di sporco, possono risultare di difficile pulizia o presentare aloni difficilmente rimovibili.

RACCOMANDAZIONI

Ricordiamo di non usare mai detergenti a base di acido fluoridrico (HFP) o dei suoi composti, compresi antirifugne o smacchiatori di tipo spray che spesso lo contengono. Il danno che si potrà provocare sarà irreparabile in quanto non esiste pavimento sul mercato resistente a tale acido.

AVVERTENZE

Le caratteristiche di pulizia dei materiali variano in modo significativo in funzione delle diverse modalità di installazione, condizioni d'uso, tipologie di superfici e ambiente. In linea generale, all'aumentare delle caratteristiche di antiscivoloza delle piastrelle, aumentano le difficoltà di pulizia. L'operatore professionale incaricato dell'intervento di manutenzione e pulizia, dovrà sempre procedere ad una preliminare verifica empirica, possibilmente su una porzione di materiale non posato, per ogni singolo tipo di intervento.

In caso di condizioni d'uso particolarmente gravose, di errata installazione o di pulizia effettuata in modo errato, Ceramica ABK non sarà oggi responsabile in merito all'efficacia delle operazioni di pulizia e manutenzione. Resto inteso che ABK non potrà essere ritenuto responsabile per eventuali danni o difetti dovuti ad errata installazione, negligente pulizia e manutenzione o inadeguata scelta della tipologia dei materiali installati e degli adesivi utilizzati con riguardo alla destinazione.

Le indicazioni contenute in questo paragrafo sono puramente indicative. Per notizie più approfondite rimandiamo a documentazione specializzata disponibile su cataloghi e siti web delle principali ditte produttrici di prodotti specifici per la pulizia dei pavimenti.

CLEANING AFTER INSTALLATION

The cleaning after installation is of fundamental importance for all the subsequent steps and for a correct maintenance.
Post-installation cleaning using acid detergents with a padding action such as Fila Deterdek or Fila Cement Remover must be carried out only once and only if this would result in the added bonus of giving the surface a more uniform aspect.
Acid-cleaning will remove all residue associated with the installation and works in general, such as mortar, adhesive, paint and dirt. It is important to underline that 90% of complaints are due to a bad, or even inexistent cleaning after installation. In order to make sure that an acid detergent used for the cleaning does not compromise the filling of grout lines, it is necessary, before proceeding with cleaning, to wet the floors so that the grout lines are impregnated and protected from the attack of the acid.
It is recommended to follow these steps:
First, remove any grease or similar substance from the floor using alkaline detergents.
Proceed with the cleaning of the surface.
Rinse the floors with an abundance of water.
The cleaning must be carried out 4-5 days after grouting (the grout must season) and within a maximum of 10 days after grouting, as, beyond this period of time the cleaning can be difficult, carefully follow the manufacturer's instructions for the use of detergents.
It is always recommended to carry out a test on a sample tile (not installed), in particular in case of honed or polished products.

CLEANING AND MAINTENANCE DAILY MAINTENANCE

It is recommended to clean the floor using a neutral detergent diluted in hot water. Avoid the use of acid, alkaline, waxing and/or impregnating products.
During ordinary cleaning procedures, it is recommended to limit the use of abrasive means such as scouring pads, iron and/or steel sponges. Taking this precaution is a must on glossy tiles, as they are more liable to scratching.
In case of dense dirt textured surfaces, use an alkaline detergent, rinsing the floor with an abundance of water.
It is important to underline that certain types of dirt like dust or sand, increase the abrasive effect of foot traffic on the surface. The use of a door mat at the entrance can help prevent this.

REMOVAL OF FILMS ON THE FLOOR

The standard detergents available on the market sometimes contain waxes or polishing additives that, cleaning after cleaning, create a film on the floor and cause rims. This type of film can also develop when using certain types of grouts. Every-day stains on the floor, such as cola, wine, water, etc. remove this film and reveal the original, more opaque aspect of the tiled surface. On a glossy floor, these areas of stain will appear as a bulge, in actual fact, they are the only clean areas of the floor itself.
In such cases, after having carried out a test, it is necessary to remove the film from the floor using an acid detergent.

Use neutral detergents, which do not contain wax or polishing additives for everyday cleaning.

EXTRAORDINARY MAINTENANCE

In case of stains that are resistant to standard cleaning operations, it is recommended to use a specific detergent depending on the type of dirt and, every single time before using such detergent, to carry out a test on a non-installed sample tile. The chart "REMOVE STAINS" indicates the recommended detergents that are effective for certain specific stains.

METALLISED FLOOR AND WALL COVERINGS

For the cleaning and maintenance of metallized tiles, it is recommended not to use acid or alkaline detergents. Use products with neutral pH such as Fila Cleaner or Faber Floor Cleaner. Every single time, test the product on a sample tile that has not been installed and do not leave the detergent on the tiles for more than 10-15 minutes. Always rinse the surface with an abundance of water.

TREATMENT OF HONED AND POLISHED TILES

Honing and polishing are manufacturing processes that always remove a superficial part of the glaze or the body of the tile itself. All honed and/or polished ceramic tiles available on the market have a micro-porous structure that, even when using low absorption vitreous materials, are vulnerable to attack from certain types of dirt that can attack the micro-porous structure and make cleaning operations very difficult.

RECOMMENDATIONS

Never use hydrofluoric acid-based detergents or its derivatives, such as rust-preventing products, or spray stain-removers that often contain hydrofluoric acid. The use of hydrofluoric acid will irreparably damage the surface, as no ceramic tile floor available on the market is resistant to this acid.

WARNING

The cleaning features of materials considerably vary depending on the installation pattern, the conditions of use and the type of surface. As a general rule, as the anti-slip value of ceramic tile increases, the cleaning operation becomes more difficult. The professional technician in charge of the cleaning and maintenance task must always carry out a preliminary test on a sample tile that has not been installed before proceeding with any cleaning operation.

In case of special conditions of use, incorrect installation or inadequate cleaning, Ceramiche ABK will not be responsible for the effectiveness of cleaning and maintenance procedures. It is agreed that ABK will not be responsible for any damage or defects that are due to incorrect installation, cleaning and maintenance or due a wrong choice of materials and adhesives.

The above-stated instructions are merely indicative. For in-depth information, please consult the specific documents that are available on the catalogues and website of the manufacturers of detergents for ceramic floors.

The difference in shades of colour cannot be declared as a material defect. Eventual complaints regarding the quality or the type of material must be submitted within 8 days from the date of delivery. The purchaser agrees to make available the disputed lots in order that the declared defects may be controlled. In any case, the installation exonerates the manufacturer from any liability. Eventual manufacturing defects or quality defects in the goods, where declared according to law and ascertained or recognized, give right only to the replacement of the defective materials, provided that the goods have been returned previously and the written authorization of the return operation has been issued, the resolution of the contract as well as any compensation for damages is permanently waived and excluded.

Les éventuelles réclamations relatives à la qualité, au type de matériel, devront nous parvenir dans les 8 jours à partir du jour de livraison. L'acheteur s'engage à mettre à disposition les parties contestées de manière à permettre le contrôle des défauts déclarés, sachant que la pose nous libère quoiqu'il en soit de toute responsabilité. Les éventuels vices ou défauts de qualité de la marchandise, si déclarés en vertu des termes de loi et confirmés ou reconnus, ne donnent droit qu'à la substitution des matériaux défectueux, à condition que les marchandises contestées ne soient rendues préalablement et, sur autorisation écrite de l'opération de restitution, en renonçant et en excluant ainsi de manière formelle la résolution du contrat tout comme les éventuels dommages et intérêts.

5) DIMENSIONS ET NUANCES Nos matériaux se classent parmi les produits cuits à haute température et peuvent présenter en tant que tels des différences entre les dimensions déclarées et celles effectivement livrées. C'est ainsi que sont considérées les différences de nuances à l'intérieur d'un même lot. C'est pourquoi, en vertu des conditions présentées précédemment, ceci ne pourra faire l'objet d'une réclamation de la part de l'acheteur.

6) EMBALLAGE ET QUANTITES Le bon état des emballages, ainsi que de la quantité livrée est confirmé après acceptation de la marchandise de la part du transporteur. Ce dernier, en signant le Bon de Livraison, se tient responsable du bon état du matériel et de la quantité. En cas de casses ou manques, l'acheteur devra demander des éventuels dommages et intérêts ou dédommagements au transporteur.

7) RESTITUTIONS En aucun cas l'acheteur ne pourra rendre le matériel sans préalablement recevoir une autorisation écrite de notre part et tous les frais sont à la charge de l'acheteur.

8) ANNULATIONS Aucune annulation de commandes ne sera acceptée si le matériel a déjà été produit ou si la phase de production a déjà été commencé, ni même si la livraison a déjà été effectuée. L'annulation de la commande comportera dans tous les cas l'obligation de la part de l'acheteur de payer la totalité de la marchandise. Au cas où l'acceptation de l'annulation est faisable, le Client sera formellement tenu à recourir tous les frais engendrés par le producteur jusqu'alors.

9) PRIX Les prix reportés sur nos catalogues ne sont pas définitifs. Nous nous réservons le droit de les modifier avant l'acceptation de la commande.

10) PAIEMENTS Les paiements ne doivent être effectués qu'aujourd'hui de notre siège. Le retard de plus de 10 jours de tout paiement dû ou non couverte dans le même délai d'un titre de crédit, transféré ou cédé, ou bien émis par l'acheteur, constitue un niveau d'insolvenza. Dans ce cas, il est en notre pouvoir de suspendre les livraisons et annuler tout rapport en cours; d'exiger le paiement intégral et immédiat de nos crédits; d'exiger le paiement intégral de tout en notre faveur et d'agir judiciairement à cet égard, de manière exécutive ou préventive ainsi que pour les dommages et intérêts. Dans tous les cas, aussi bien qu'un paiement du dépasse le délai des 10 jours, nous sommes autorisés à émettre une traite à vue avec frais sans préavis. En outre, les intérêts moratoires annuels calculés en fonction du taux "premiers versements" courant majoré à 5 points pourcents, prendront effet sur le débit dépassé.

11) MINIMUM UNITE DE VENTE Aucune vente inférieure à la boîte ne peut être effectuée.

12) DOMAINE RÉSERVÉ Le matériel, même si livré et régulièrement facturé reste notre propriété jusqu'au paiement total de ladite marchandise, même en cas de passage ou vente à un tiers.

13) TRIBUNAL COMPETENT Le Tribunal de Modena sera compétent de manière exclusive en cas de litige.
